Among Living
Organisms**

Analyze the habitats of living organisms.

Animals use plants as a form of shelter within their environment. You can describe the interdependence of living organisms by stating how an organism builds its form of shelter. For example, many birds

Interdependence

Among Living

Organisms
interactions are the interactions between different organisms in an environment. In the natural world, no organism is cut off from its surroundings. Organisms are a part of their environment which is rich in living and non-living elements that interact with each other in some way.

different categories of organisms: producers, consumers and decomposers.

Producers are organisms such as plants and algae that create energy through photosynthesis.

Consumers eat other organisms for their energy. Decomposers break down dead plants and animals and return nutrients to the soil.
