majority of lenses being manufactured today are capable of being used in either autofocus or manual focus mode. Canon does not make a single lens for their DSLR cameras that isn't capable of both. This wasn't always the case. Before Canon helped pioneer autofocus systems, it produced all-manual-focus FD ...

3. Autofocus vs. Manual Focus | Top Seven Considerations ...

So in this movie, I want to compare manual zoom lenses, servo zoom lenses, and prime lenses, and talk about some of the practical considerations of shooting with each. So let's start off with prime lenses. Prime lenses, of course are any lens that has a fixed focal length, 35 millimeter, 50 millimeter or 85 millimeter lenses are all popular choices for prime lenses.

limitation, and I am more likely to take an image with my subject in focus in an extreme corner when I use one. The rule of thirds for composition is a great starting tool, but sometimes rules are made to be broken. Take a look at this shot of a family games night.

Why Every Photographer Should Use a Manual Focus Lens

By switching to manual you can tell the lens what you want to focus on so the white flower in front of a white background will be the point of focus in your shot. Action Photography.

Ten Reasons When Manual Focus Is Better Than Auto Focus

The high end Yashica lenses in the 80's and 90's were made by Kyocera, the same company that made most of the Zeiss lenses for 35mm SLR's. They are really very good. My Yashica 80-200 f4 zoom is the best zoom lens I have ever used in that focal length range and I have used some really good ones

Manual Lenses - phillipreeve.net

In a manual focus camera, movements to the lens ring adjust the angle of two mirrors. The two images this produces will eventually line up, bringing the scene into focus. Autofocus works on this same principle, however instead of the user judging when the image is in focus, the camera uses an electronic sensor to do the same job.

Photography Basics #4: Digital Auto Focus vs Manual Focus ...

Now, if a fisheye lens is defined as an ultra-wide angle lens due to its large angular field and short focal length, a wide angle lens is never a fisheye as it cannot project a 180 degrees field of view. To clarify things, it is impossible for a wide angle lens to achieve a curvilinear perspective and an angular field exceeding 180 degrees.
