Engine Light On - No Communication W/ Scan Tool - YouTube

Check for an open circuit. An open ground or power (B+) circuit on a fuel-injected engine removes power from the ECM and prevents the engine from starting. ADDITIONAL INFORMATION: Old PCM is fried, see the attached picture when attempts are made to communicate after fixing the wiring problem. The new PCM works fine.

What to do if the OBD II scanner doesn't communicate with ...

Okay here is an update. I am pretty sure the OBD port is disconnected somewhere on the way to the computer. On the bright side I found the EEC-IV data link connector in the engine compartment and jumped the (T/O) wire for circuit 914 and the (PK/LB) wire for circuit 915 to pins 2 and 10 on the OBD port.

no communication @ data port | Chevrolet Malibu Forums

The most common reason for getting no OBD code is simply a blown fuse. On many cars, the engine control module (ECM)—also called the engine control unit or electronic control unit (ECU) or powertrain control module (PCM)—is on the same fuse circuit as other electrical devices, such as the cigarette lighter or accessory port.

Why You Can't Read Your OBD-II Codes - LiveAbout

If you run across a 2008 Toyota Tundra (3UR-FE) and have a no start, no ECM communication condition and there is no "Check Engine Light" bulb illuminated during the function check, disconnect the secondary air valves.These have a tendency to short the 5 volt reference line and stop all ECM communication.
